

English Oral Topic – Environment.

<https://home-tuition.sg>

We need to take care of our planet. What can you do to protect our environment?

How can you be environmentally friendly?

What are your contributions to the green movement?

Key concepts:

3R's - Reduce, Reuse, Recycle

Save Electricity - Reduce Waste => How?

Ozone layer - Global warming - Climate change

Sample responses:

It is important to save our planet. As we have only one planet as our home. At home we do not throw away all our things like old clothes, books and newspapers. We collect them and put them in plastic bags for recycling. I try to use the fan instead of the air-conditioning. I save paper by using recycled paper to do my homework. These are some of the small things everyone can do to save our earth.

We can reduce, reuse and recycle. We can use less paper. Paper is made from trees and if too many trees are cut down, we will lose the clean air and shade that they provide us with. We should also use less air conditioning and chemicals like hair spray as they are harmful to the environment. We should also reuse things instead of throwing them away.
